

Event Management System

Presented By: Aryan Doshi

Introduction

AnEvent Management System is a web-based application designed to simplify eventplanning, scheduling, and management. It offers an intuitive admin dashboard for creating, updating, and overseeing events efficiently.

User-friendly Interface

Clear layouts, accessible controls, and logical flows for admins and organizers.

Responsive Design

Layouts adapt across desktop, tablet, and mobile via Flexbox & Grid.

Centralized Management

A single dashboard to manage events, attendees, categories, and status.

Easy Navigation

Sidebar, topbar shortcuts, and contextual actions reduce task time.

Problem Statement

Traditional event management processes are often inefficient and error-prone. This project addresses common friction points that slow planning and reduce visibility.

Manual Records

Paper-based tracking and scattered spreadsheets cause data loss and duplication.

Time-consuming

Repetitive tasks and manual updates increase planning time and errors.

Poor Tracking

Difficulty monitoring event status, attendees, and follow-ups in real time.

Lack of Centralization

No single view for events, categories, members, and status across teams.

Project Objectives

Create Events

Fast form-based creation with validation and preview.

Manage Categories

Organize events by category with create/edit/list views.

Display Event List

Sortable, searchable list with status and action buttons.

Register Members

Invite and add participants; track attendance.

Responsive Dashboard

Maintain usability across devices using Grid & Flexbox.

Easy Navigation

Clear sidebar, breadcrumbs, and contextual controls.

Attractive UI

Clean typography (Poppins/Montserrat), rounded cards, subtle gradients.

Technology Stack

Frontend

HTML5—Semantic structure for accessibility and SEO.

Styling

CSS3withFlexbox, CSS Grid, and media queries for responsiveness.

Icons

FontAwesome for consistent, lightweight iconography.

Tools

VisualStudio Code and Live Server for development and rapid testing.

Project Modules — Flow

This flow maps primary user journeys from registration through event creation, member management, wish lists, and completion tracking.

Dashboard Overview

Admin Panel

Central control for events, members, and categories.

Sidebar Navigation

Quick access to Create Event, Event List, Signup, and Reports.

Dashboard Cards

At-a-glance KPIs: total events, pending approvals, upcoming events.

Responsive Layout

Cards reflow for tablet and mobile while keeping core actions accessible.

Create Event Module

The illustration shows a 'CREATE- EVENT' form overlaying a street scene. The form has a title bar with a close button. It contains the following fields and controls:

- Event name**: A text input field.
- Category**: A dropdown menu with a blue icon and a downward arrow.
- End Date**: A checkbox that is checked.
- Venue**: A checkbox that is checked.
- Description**: A text area with a downward arrow.
- SUBMIT**: A large blue button at the bottom.

Form Fields

Event Name, Category, Start Date, End Date, Venue, Description — concise and validated.

Validation & UX

Required-field validation, inline error messages, and focused inputs for accessibility.

Responsive Form

Two-column layout on desktop, single-column on mobile using media queries.

Call to Action

Prominent submit button with visual confirmation and success feedback.

Event List Module

Displayed Columns

Event ID, EventName, Category, Venue, Dates, Status, Edit/Delete actions.

Status Values

Active, Pending, Completed — color-coded badges for quick scanning.

Controls

Search, sort, pagination, and bulk actions for efficient management.

Navigation, Responsive Design & Future Roadmap

Navigation

Dashboard • Create Event • Event List • Signup — consistent sidebar and topbar shortcuts.

Responsive Features

Flexbox and CSS Grid drive adaptive layouts; media queries for breakpoints.

Future Enhancements prioritize security, persistence, interactivity, and analytics to move from a static front-end prototype to a full-stack event platform.
